JINGCHEN (MONIKA) HU, PHD

Generating Synthetic Family Income for the Consumer Expenditure Surveys Have you ever filled out surveys and worried about your submitted personal information not being protected? Such worries are sensible and legitimate, as researchers have demonstrated great risks associated with personal-level data released to the public. In this talk, Dr. Hu will introduce synthetic data, an approach to data dissemination which provides good data utility and sufficient privacy protection.

Monika Hu is an Assistant Professor of Mathematics and Statistics at Vassar College.
